Timing Methodology

The MGG timing is based on Strava segment times posted on the race day.

Athletes were required to supply a strava name, be a member of the RSGA Strava group, and have their ride set as public.

At noon on 8/1/2022, the results for the segments were pulled. This allowed enough time for participating athletes to upload their rides, and have Strava complete processing. Hand processing was completed to normalize athlete names to athlete numbers.

Segment MGG S1 SCHAGHTICOKE was used to identify racers who started, and matched the RSGA Club criteria. Additional manual adjustments were made to incorrect or unsupplied strava names where possible. An additional check was made to confirm the required segments were completed, on the route for which the rider was registered.

At this time it is not possible to be added to the strava group and have the results recalculated because of the manual nature of the data retrieval.

Results will become final if no errors in math, or matching, are identified.
